Armrest Glider

Gliding armrest. Effortless flow. Glider is an ergonomic armrest designed to move naturally with you. Even though a centered mouse or centered pointing device is the best choice for you, we know that a many still use a traditional mouse or a vertical mouse. Hence, it's important to also improve the ergonomics for those. The Glider is designed to do so. Resting directly on the desk surface, it glides smoothly as you navigate and work — creating a neutral feeling of motion while reducing friction and strain on your wrist, forearm, and shoulder.

Benefits of Armrest Glider

Designed for modern workspaces, Glider brings together movement, comfort, and simplicity in one elegant ergonomic accessory. Its soft curved shape provides stable support exactly where you need it, helping your arm stay relaxed throughout the workday. The low-friction base allows controlled and quiet movement across the desk, while the premium soft-touch surface delivers comfort during long hours of use.

Minimal in form and intuitive in function – Glider follows your natural workflow. Whether you are using a standard mouse or vertical mouse, or transitioning between tasks, it creates a smooth and effortless working experience.

Facts

- Width: 135 mm
- Depth: 113 mm
- Height: 35 mm
- Weight: 95 g
- Product code: TB221

Key features
